

CLAIMS:

1. A method for determining central systolic pressure, including the steps of:
determining a time t from pressure wave foot to peak in a central carotid artery;
5 measuring a radial pressure waveform; and
locating the pressure wave foot in the radial pressure waveform and
determining the corresponding pressure at time t after the wave foot;
wherein said corresponding pressure is substantially the central systolic pressure.
- 10 2. A method for determining central systolic pressure, including the steps of:
measuring a radial pressure waveform;
locating the time of start of a component of said waveform attributable to
lower body wave reflection; and
determining the central systolic pressure by taking the value of the
15 pressure waveform at said time.
3. The method according to claim 2, wherein said step of locating the time
includes the following steps:
determining the peak of said measured waveform;
determining if there is a minimum of a first derivative of said waveform
20 before said peak;
if a minimum is determined then the time is located at the occurrence of the
determined peak;
if no minimum is determined then:
searching for a first zero crossing of a second derivative of said waveform
25 from positive to negative after said peak and before incisura;
if a first zero crossing is found then the time is located at said first zero
crossing;
if a first zero crossing is not found then:
searching for a zero crossing of a third derivative of said waveform from
30 positive to negative before said peak;

if a zero crossing is found then the time is located at the occurrence of the determined peak;

if a zero crossing is not found then:

- 5 searching for a first zero crossing of the third derivative from positive to negative after said peak and locating the time at said zero crossing.

4. The method according to claim 3, wherein said step of determining if there is a minimum of a first derivative of said waveform before said peak includes determining if there is a zero crossing of a second derivative from negative to positive before said peak.

- 10 5. An apparatus programmed for determining central systolic pressure according to the method of any one of the preceding claims.

6. A software product for programming a device to determine central systolic pressure according to the method of any one of claims 1 to 4.
